Difference Between Call(), Apply() & Bind()

In JavaScript

@Mohammed Wajid

Call()

1.Call() binds the this value,invokes the function,and allows you to pass a list of arguments

Apply()

2.Apply() binds the this value, invokes the function, and allows you to pass arguments as an array

Bind()

3.Bind() the this value,returns a new function, and allows you to pass in a list of arguments
